Any LDAP-based directory
Active Directory Integration

STORAGE ARCHITECTURE

Any SAN, and DAS, and any Fibre Channel or iSCSI NAS

Robust Linux messaging solution designed for small businesses.

Scalix Small Business Edition is a single-server edition built on the open source Scalix Collaboration Platform with its robust Mail Server, comprehensive administrative environment, powerful Web services platform, and localization kit. In addition to the Scalix Collaboration Platform components and features, Small Business Edition provides the following business-essential capabilities.

FULL SUITE OF TRUE ENTERPRISE CLIENTS

Scalix Small Business Edition provides full feature, native MAPI support of Outlook and full feature native support of Evolution, delivering two powerful desktop client options so users of both Windows and Linux desktops can be highly productive. Small Business Edition also supports Scalix Web Access, an AJAX-based Web client that gives users the same full function experience and fast performance they get with a desktop client. It supports the innovative Scalix Mobile Web Client which gives organizations a simple way to keep all users connected while mobile, without having to install anything on the device or pay any license fees. And of course, Scalix Small Business Edition provides free access for an unlimited number of IMAP or POP clients.

SUPPORT FOR ALL LEADING WIRELESS DEVICES

Scalix Small Business Edition supports all leading wireless devices via an optional 3rd party wireless solution. The solution, NotifyLink Enterprise Mobility Solution for Scalix, is offered by Notify Technology Corporation. NotifyLink allows Premium Users of Small Business Edition to access all Scalix mailbox email and PIM (calendar, contacts, tasks, and notes) across a broad choice of wireless network technologies and wireless devices including Palm OS devices, Windows Mobile SmartPhones, Windows Mobile Pocket PC/PPC Phone Edition devices and Blackberries.

INSTANT, USER-SPECIFIC RECOVERY OF DELETED ITEMS

Scalix Small Business Edition provides a means for Premium Users to rapidly recover deleted items on a user-specific basis. The Recovery Folder retains emails removed from the user's Deleted Items folder. The Recovery Folder itself is hidden from the user's view, but when needed can be made visible to the user with a click. The user then sees their Recovery Folder as they do any other mailbox folder and can retrieve their lost item.

PRODUCT DATASHEET: SCALIX SMALL BUSINESS EDITION

SYSTEM REQUIREMENTS

Operating Systems:
For Production:
One of the following versions of Linux:
• Red Hat Enterprise Linux ES 4.0, 5.0
• SUSE Enterprise Server 9.0 or 10.0
• Xandros Server 2.0

For Evaluation:
• Includes all production operating systems
• Fedora 7*
• SUSE Open Source Software (OSS) 10.2*

RAM
1GB

Disk
200 MB for base installation
  + Space for user mailboxes
  + Space for client caches equivalent to 15% of data being indexed
  + 30% additional for LVM snapshot

*These distributions are not supported in production environments because of their instability.

ABOUT SCALIX

Scalix offers the only messaging solution that provides a full selection of true enterprise clients, the unique ability to keep all employees connected while mobile without any special software or overhead, and significant cost savings via open standards and an innovative user licensing model. All on a rock solid, Linux-based, open source platform.

ACTIVE DIRECTORY EXTENSIONS

Scalix Mail Server integrates with any LDAP-based directory such as Microsoft Active Directory, Novell eDirectory, RedHat/Fedora Directory Server, OpenLDAP and others. This provides choice, flexibility, and investment protection. In addition, Small Business Edition provides Active Directory extensions so Scalix-specific object classes and attributes can be created within Active Directory. With Active Directory Extensions, two new Scalix-specific tabs appear in the Active Directory Users and Computers interface (ADUC), and all Scalix users and groups can be managed using the easy and familiar ADUC interface and wizards.

TNEF FOR TRANSPARENT EXCHANGE CO-EXISTENCE

Small Business Edition offers full interoperability with proprietary Microsoft Exchange environments, using TNEF for transparent server-to-server co-existence. This provides the freedom to migrate over an extended period of time or maintain a mixed environment. With Scalix, "what you see is what they sent." Full fidelity is maintained for all messages and calendar items including fonts, tables, word wrapping, line breaks, and reply-ability. When a meeting request is received from an Exchange user, for example, it looks and acts like a Scalix meeting request.

MIGRATIONS FROM EXCHANGE TO SCALIX

The optional Scalix Migration Tool allows user data to be easily migrated from Exchange to Small Business Edition Premium User mailboxes. No changes to the corporate directory or network topology are required. The tool reliably migrates all mailboxes, messages, public folders, calendars, and directory data from Exchange. The migration process ensures full mailbox and message fidelity and message reply-ability.

SEAMLESS UPGRADES

Upgrading from Small Business Edition to Enterprise Edition involves an in-place, license key-only upgrade that can be performed without any user disruption – even while users are logged in and active. Community Edition running on a supported platform can be upgraded to Small Business Edition in the same way – with a license key-only upgrade.

COST-SAVING LICENSING MODEL

Small Business Edition is available for companies that need between 10 and 150 users. Scalix provides a simple migration path to the Enterprise Edition for companies that grow beyond 150 users.
